

Cinema has a 4k laser projector and a presentation computer that can be used to show content by the presenter.

There is enough space under the projection that you should not cover the content during the presentation. That said, we recommend you avoid adding too much content in the corners and the bottom of the screen

Add bigger high-resolution images & videos

Avoid making the slides too busy and full of information that might be hard to see.

Use font sizes larger than usual.

No projection here
