

Linking infra to a new output record you are adding to ACRIS

- Scroll down the record to “Relations”-section
- Select “Facilities/Equipment” and search for the appropriate infra by typing the infra’s name into the search field (list of infra names available in section List of infrastructures in ACRIS)
- Click “Save” to close the form

The screenshot displays the ACRIS interface for editing a record. On the left is a navigation sidebar with sections: EDIT (with a red cross icon and a plus sign), Metadata (highlighted in blue), Metrics, Translation, and Manage duplicates; OVERVIEW (with Relations, Fingerprints, and Display); HISTORY AND COMMENTS (with History and comments); and NOTIFICATIONS (with the text 'For further inquiries, please'). The main content area is titled 'Relations' with an information icon. It lists several categories, each with a plus icon and a specific symbol: Research Outputs (document icon), Activities (briefcase icon), Prizes (trophy icon), Press/Media (megaphone icon), Projects (cube icon), Impact (target icon), Datasets (list icon), and Facilities/Equipment (cylinder icon). A prominent red arrow points to the 'Facilities/Equipment' option. Below this list is a 'Visibility' section with an information icon.

Note: Infrastructures OtaNano – Low Temperature Laboratory, OtaNano – Nanofab, and OtaNano – Nanomicroscopy Center are part of “main” infrastructure OtaNano. In case you link one or more of these subinfras to your output record, please, link also the “main infra” OtaNano to the record. For example, if you have made your research at Low temperature laboratory, link to the output record:

- Otanano
- Otanano – Low temperature laboratory
